

The participation of School Eidos from Zaporozhye in the international children's conference in Seoul.

On February 22, 2020, the 4th International Children's Scientific Conference, in Russian language, "Young Researcher", was held in Seoul. This year, the geography of participants has expanded. 40 students from the Republic of Korea, the Russian Federation and Ukraine shared their achievements. In total, the event was attended by over 200 people. Conference guests were Tatyana Romanova, coordinator of the RASA-JAPAN association of Russian-speaking scientists of Japan, and Igor Gredynarov, chairman of the Ukrainian TRIZ association.

For the first time, School Eidos students traveled to distant Korea to report on their research work. The supervisor of the research was Elena Gredynarova. It was a very useful experience of an international conference, instilling interest in research activities. We were introduced to the oldest higher educational institution in South Korea - Sungkyunkwan University. The university was a co-organizer of the conference.

There were 4 sections at the conference. In the section "History and Culture", our student Dmitry Minyailo received a prize certificate for the work "Fascism: the problem of terminology". He conducted research work using the FSP (Functional Systemic Approach).

During the visit, the delegation of the school EidoS met with TRIZ experts from the Samsung Electronics Global Technology Center, Oleg Feygenson and Igor Ivanov, who made a presentation about Samsung and the role of TRIZ in the company's innovative activities and answered the participants' questions. The presentation met with great interest and generated a large number of questions. Among other things, we learned that 35 thousand employees of Samsung Electronics possess the basic knowledge of TRIZ through company supported training.

We were introduced to Seoul by Prof. Yong Wong Song, TRIZ Master, Vice President of the Korea Polytechnic University. He devoted to us the entire day. Introduced us to delicious food in a Korean restaurant, showed us the Palace of the Emperor.

In addition, discussions were held between the leadership of the school EidoS and MATRIZ representatives on the logistics for the development of TRIZ-Pedagogy curriculum for children of various ages.

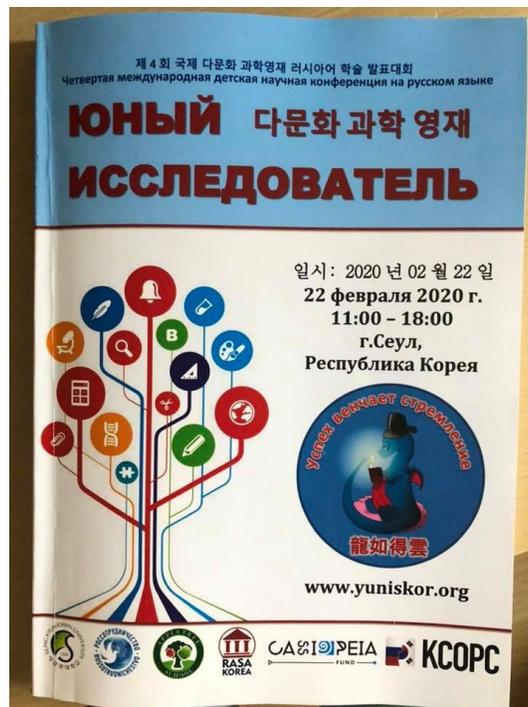

We want to thank Nadezhda Feygenson for inviting us to participate in the 4th International Conference “Young Researcher”, and the conference Organizers: “Apple Tree School” and Sungkyunkwan University for great conference, and all TRIZ specialists, who devoted their time to us.
